Question 1. (Multi Select)

You are using the Configuration Wizard to create a new domain that will consist of a cluster of a of three managed servers along with an instance of WebLogic server acting as HIPT proxy to distribute traffic to the cluster.

Which three steps should you perform with the Configuration Wizard?

A: Create one Cluster.

B: Install Oracle HTTP Server.

C: Create one Coherence server.

D: Create four managed servers.

E: Assign three servers to a cluster.

F: Specify a proxy port tor the administration server.

Answer: A, D, E

Question 2. (Single Select)

Which statement is true about stopping Node Manager?

A: Using the stopNodeManager.sh script so Node Manager stops gradually.

B: You may kill the Node Manager process by using operating system commands.

C: Using the administration console, select the appropriate machine and click stop.

D: The administration server goes into ADMIN mode if it can no longer Communicate with Node Manager.

E: If you stop Node Manager, the managed servers it started will also stop.

F: The managed servers that Nod Manager started go into ADMIN mode if they can no longer communicate with Node Manager.

Answer: B

Question 3. (Multi Select)

When creating a dynamic cluster, you have multiple options concerning how dynamic servers are distributed across machines in your domain. Identify three supported configurations.

A: Use a single machine.
B: Use all machines in a subnet.
C: Use all machines in the domain.
D: Use all percentage of machines in the domain.
E: Use all machines whose names match an expression.

Answer: A, C, E

Question 4. (Single Select)

Which action should you take to automatically back up the domain configuration when anyone Activates a configuration change?

A: Enabling automatic domain configuration creates backups of the configuration during server boot not at each activation.
B: The administration console , select " Follow Configuration changes" In the Shared preferences for the console.
C: In the administration console, select "Configuration Archive Enabled" under the general configuration of the domain.
D: USE the backup=,true, parameter of the ad activate () command In WLST.

Answer: C

Question 5. (Single Select)

As the technical lead for your project, you have been asked to recommend a new solution to handle frequently increasing loads on your applications. The Weblogic 12.1.2 domain currently runs with two clusters of three servers with request being filtered and passed by a proxy server that users the round –robin algorithm.
However, the load sometimes exceeds the maximum capacity of all these servers combined but your domain lacks in scalability.
What is the best implementation solution?

A: Replace the software load balancer with a hardware load balancer.

B: Configure dynamic clusters and specify the number of server instances you anticipate at needing at peak load.

C: Modify the proxy server load balancing algorithm to weight based.

D: Add a third cluster and spread existing server instances across the clusters.

E: Tune work managers to optimize work.

Answer: C
