Latest Version: 7.3
Subjects

1. SAP AI Core
2. Advanced AI Techniques with SAP's generative AI hub
3. Large Language Models (LLMs)
4. SAP's generative AI hub

Topic: 1
SAP AI Core

Question: 1

What must be defined in an executable to train a machine learning model using SAP AI Core? Note: There are 2 correct answers to this question.

A. User scripts to manually execute pipeline steps
B. Pipeline containers to be used
C. Deployment templates for SAP AI Launchpad
D. Infrastructure resources such as CPUs or GPUs

Answer: B, D

SAP AI Core

Question: 2

What can be done once the training of a machine learning model has been completed in SAP AI Core? Note: There are 2 correct answers to this question.

A. The model can be deployed in SAP HAN
B. The model can be deployed for inferencing
C. The model can be registered in the hyperscaler object store.
D. The model's accuracy can be optimized directly in SAP HAN

Answer: B, C

SAP AI Core

Question: 3

Which of the following must you do before connecting to a dataset in order to train a machine learning model in SAP AI Core? Note: There are 2 correct answers to this question.

A. Store the dataset in a hyperscaler object store.
B. Grant access rights to the SAP BTP cockpit.
C. Store the dataset in the SAP HANA Vector Engine.
D. Provide the storage secret to access the dataset.

Answer: A, D

SAP AI Core

Question: 4

How does the Al API support SAP Al scenarios? Note: There are 2 correct answers to this question.

A. By integrating Al services into business applications
B. By managing Kubernetes clusters automatically
C. By providing a unified framework for operating Al services
D. By integrating Al models into third-party platforms like AWS

Answer: A, C

SAP AI Core

Question: 5

What are some functionalities provided by SAP AI Core? Note: There are 3 correct answers to this question.

A. Continuous delivery and tenant isolation for scalability
B. Management of SAP S/4HANA cloud infrastructure
C. Integration of Al services with business applications using a standardized API
D. Orchestration of Al workflows such as model training and inference
E. Monitoring and retraining models in SAP Al Core

Answer: A, C, D

SAP AI Core

Question: 6

What are some components of the training pipeline in SAP AI Core? Note: There are 2 correct answers to this question.

A. Executables that define the training process
B. The SAP HANA database for model storage

C. Automated deployment to Kubernetes clusters
D. Input datasets stored in a hyperscaler object store

Answer: A, D

SAP AI Core

Question: 7

What does SAP recommend you do before you start training a machine learning model in SAP AI Core? Note: There are 3 correct answers to this question.

A. Register the input dataset in SAP AI Core.
B. Configure the model deployment in SAP AI Launchpad.
C. Perform manual data integration with SAP HAN
D. Configure the training pipeline using templates.
E. Define the required infrastructure resources for training

Answer: A, B, E

SAP AI Core

Question: 8

How do resource groups in SAP AI Core improve the management of machine learning workloads? Note: There are 2 correct answers to this question.

A. They enhance pipeline execution speeds through workload distribution.
B. They ensure workload separation for different tenants or departments.
C. They enable simultaneous orchestration of Kubernetes clusters.
D. They provide isolation for datasets and Al artifacts.

Answer: B, D

SAP AI Core

Question: 9

What are some benefits of the SAP Al Launchpad? Note: There are 2 correct answers to this question.

A. Direct deployment of Al models to SAP HAN
B. Centralized Al lifecycle management for all Al scenarios.
C. Integration with non-SAP platforms like Azure and AWS.
D. Simplified model retraining and performance improvement.

Answer: B, D

Topic: 2
Advanced AI Techniques with SAP's generative AI hub

Question: 10

An AI development team wants to integrate multiple LLM providers into their orchestration workflow of SAP's generative AI hub. The team wants to ensure seamless future expandability and minimum rework when adding new LLM providers.
What does SAP recommend the team does? Note: There are 2 correct answers to this question.

A. Provide direct interface with each provider's proprietary SDKs, to allow granular control over each integration.
B. Use the orchestration service's provider-agnostic interface to access various LLMs, using configuration parameters to switch between providers without redeploying models.
C. Provide prebuilt modules initially and use orchestration services when all desired models and SDKs are supported by default.
D. Use generative AI hub SDKs and client libraries to enhance applications with generative AI.

Answer: B, D
