D. To configure Kubernetes runtime profiles

Answer: C

Question: 4

What can cause image assessment findings to be suppressed in the console?
(Choose two)
Response:

A. CSPM module not licensed
B. Image exclusions match repository patterns
C. Dockerfiles contain Falcon agent references
D. Image scan is scoped to a different registry

Answer: B,D

Question: 5

Which type of activity would be flagged as suspicious during IAM user account audits?
Response:

A. Periodic role revalidation
B. MFA enforcement
C. Privilege escalation via API call
D. Login from a whitelisted IP

Answer: C

Question: 6

What does an image assessment report in Falcon primarily evaluate?
Response:

A. Container network policies
B. Application CPU utilization
C. Malware, CVEs, secrets, and misconfigurations
D. Kubernetes node performance

Answer: C

Question: 7

Which two findings would indicate risky IAM practices?

(Choose two)
Response:

A. MFA disabled on admin accounts
B. IAM user created within last 24 hours
C. Inline policy with full access to all resources
D. Use of multiple availability zones

Answer: A,C

Question: 8

If a newly registered Azure subscription is not returning data, verify that the CrowdStrike app registration has _____ roles assigned.
Response:

A. Storage Blob Data Reader
B. Reader and Contributor
C. Kubernetes Admin
D. Network Policy Operator

Answer: B

Question: 9

What capability does the Kubernetes Admission Controller provide within CrowdStrike Falcon Cloud Security?
Response:

A. Schedules container scans
B. Blocks or allows container deployments based on policy
C. Encrypts data in motion
D. Monitors IAM user behavior

Answer: B

Question: 10

Which two challenges are addressed by Kubernetes admission controller policies?
(Choose two)
Response:

A. Automatic data masking
B. Enforcing image assessment before deployment
C. Preventing drift detection
D. Blocking insecure workloads at runtime

Answer: B,D
