FCSS_SASE_AD-25

Fortinet FCSS SASE AD-25 Exam Guide with Simple Questions and Clear Answers

Certification Name:	**FCSS – Forti SASE 25 Administrator**
Exam Type / Format:	**Online & proctored at test centres**
Language Options:	**English**
Exam Duration:	**~ 90 minutes**
Number of Questions:	**60**
Passing Score:	**70%**
Ideal For:	**Network, security, and SASE professionals**
Certification Validity:	**2 years from the date of passing the exam**

Question No: 1 (Single Select)

PRACTICE TEST SOFTWARE

Which information can an administrator monitor using reports generated on Forti SASE?

Options:

A: Sanctioned and unsanctioned Software-as-a-Service (SaaS) applications usage
B: FortiClient vulnerability assessment
C: SD-WAN performance
D: Forti SASE administrator and system events

✅ **Correct Answer: A**

Explanation:

- Forti SASE reports help track which cloud apps are being used in your network.
- It shows both **approved** (sanctioned) and **unapproved** (unsanctioned) SaaS apps.
- This gives administrators clear visibility into user activity.
- It also helps in applying better **security and compliance** rules.
- This way, risky apps can be blocked or monitored more closely.

Question No: 2 (Multi Select)

PRACTICE TEST SOFTWARE

In the Secure Private Access (SPA) use case, which two Forti SASE features facilitate access to corporate applications?

Options:

A: cloud access security broker (CASB)
B: SD-WAN
C: zero trust network access (ZTNA)
D: thin edge

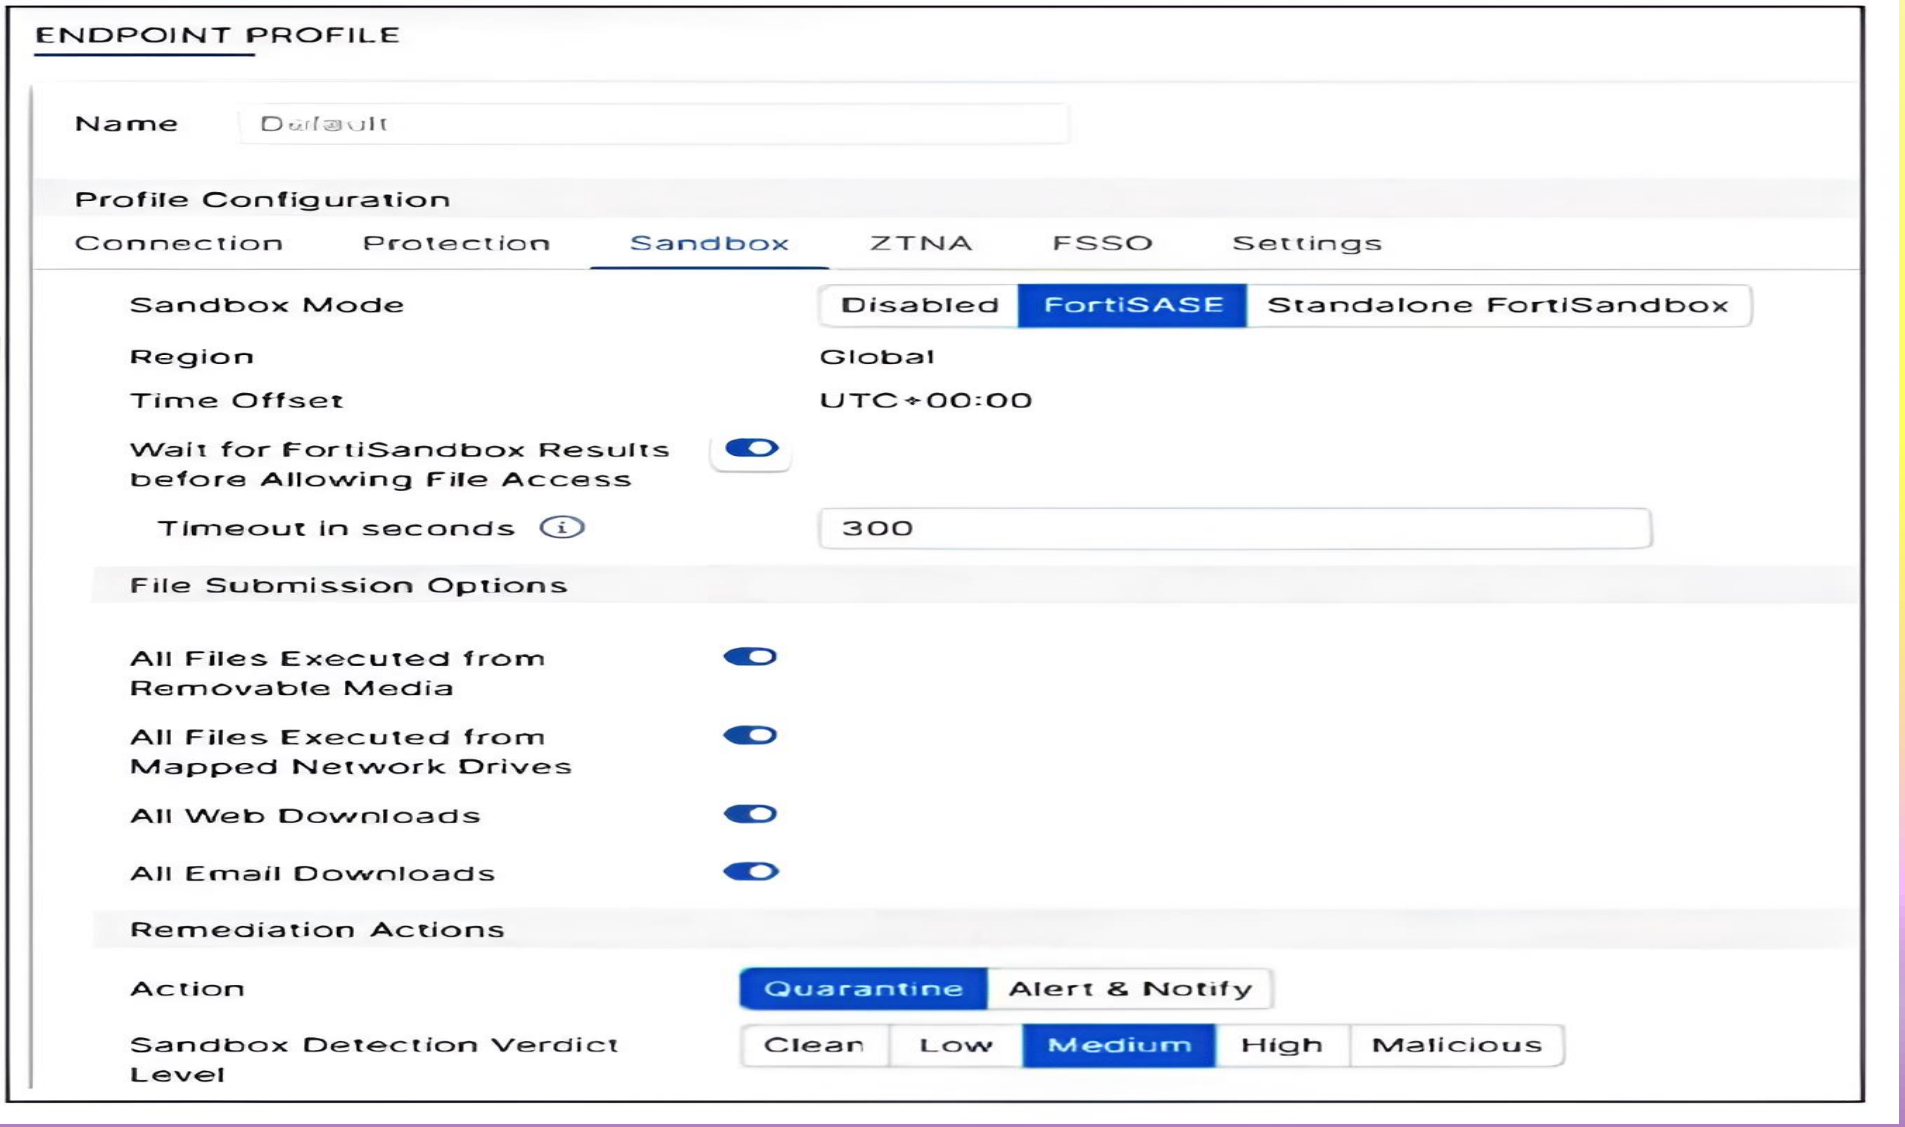
✅ **Correct Answers: B,C**

Explanation:

- **SD-WAN** makes sure traffic from users reaches the company apps efficiently and securely.
- **ZTNA** checks and verifies users before letting them access private resources.
- Together, they ensure smooth and safe access to apps.
- This improves both **security** and **user experience**.
- It's a core part of SPA in Forti SASE solutions.

Question No: 3 (Multi Select)

Refer to the exhibit.



Question No: 3 (Multi Select)

PRACTICE TEST SOFTWARE

Based on the configuration shown, in which two ways will Forti SASE process sessions that require Forti Sandbox inspection?

Options:

A: Only endpoints assigned a profile for sandbox detection will be processed by the sandbox feature
B: FortiClient quarantines only infected files that Forti Sandbox detects as medium level.
C: All files executed on a USB drive will be sent to Forti Sandbox for analysis.
D: All files will be sent to a on-premises Forti Sandbox for inspection.

✅ **Correct Answers: C,A**

Explanation:

•Forti Sandbox works only if the **endpoint has a sandbox profile** assigned.
•It automatically sends files from USB drives to the sandbox for checking.
•This ensures harmful files are **detected early**.
•It protects the system from **unknown or hidden threats**.
•Only the targeted devices are scanned, saving system resources.

Question No: 4 (Single Select)

PRACTICE TEST SOFTWARE

An administrator must restrict endpoints from certain countries from connecting to Forti SASE. Which configuration can achieve this?

Options:

A: Configure a network lockdown policy on the endpoint profiles.
B: Configure a geography address object as the source for a deny policy.
C: Configure geofencing to restrict access from the required countries.
D: Configure source IP anchoring to restrict access from the specified countries

✅ **Correct Answer: C**

Explanation:

- **Geofencing** uses the device's location to allow or block access.
- Admins can pick specific countries to **block connections** from.
- This is useful for **location-based security controls**.
- It helps stop unauthorized access from high-risk regions.
- The setup is quick and doesn't need complex firewall rules.

Question No: 5 (Single Select)

PRACTICE TEST SOFTWARE

What is the benefit of SD-WAN on-ramp deployment with Forti SASE?

Options:

A: To provide access to private applications using the bookmark portal
B: To provide device compliance checks using ZTNA tags
C: To secure internet traffic for branch users
D: To manage branch location endpoints

✅ **Correct Answer: C**

Explanation:

- SD-WAN on-ramp sends branch office internet traffic to **Forti SASE cloud**.
- The traffic is scanned and protected before reaching the internet.
- This gives **strong, consistent security** for all branch users.
- It helps avoid building complex security setups at each branch.
- This reduces cost while improving protection.
